

GEOG 4000/5000 TOPICS IN GEOGRAPHY: APPLIED RESEARCH IN GEOGRAPHY

Have you wondered how applied geographic research is actually conducted? In this course, **you will take part in a real research project** and be guided through the steps of applied geographic research. This semester, we will study how the opening of **light rail transit** lines affects **residential mobility** in and around adjacent neighborhoods. Using both **quantitative** and **qualitative methods**, you will help the research team address questions such as: *What are the characteristics of people moving in and out of transit neighborhoods? What is the relationship between transit investments and income segregation?*
