

PHYS 2102

Exam 2

Spring 2003

Dr. Aktas

Name : _____

SS # : _____

You have five questions: 20 points each.

This is a closed book exam. I understand I am not to use any notes or information other than on this exam sheet. I may use a pocket calculator but only for the purpose of numerical calculation. I accept the responsibility to know and observe the requirements of the UNC-Charlotte Code of Student Academic Integrity.

Signature

Good luck

Show all of your work. Do not skip steps. First write down the relevant equations then substitute the numbers if necessary.

1. Consider a spherical capacitor with inner radius “a” and outer radius “b”. It is charged to q Coulombs. Calculate its capacitance in terms of a , b and q . Show your all steps.

2. In figure below the battery has a potential difference of 10 V and the five capacitors each have capacitance of $10\ \mu\text{F}$. What is the charge on capacitor 1 and capacitor 2?

3. The current density across a cylindrical conductor of radius R varies in magnitude according to the equation

$$J = J_0(1 - r / R)$$

where r is the distance from the central axis. Thus, the current density is a maximum J_0 at that axis ($r = 0$) and decreases linearly to zero at the surface ($r = R$). Calculate the current in terms of J_0 and the conductor's cross-sectional area $A = \pi R^2$.

4. For the circuit in Figure below, find (a) the current in each resistor, (b) the power supplied by each emf, and (c) the power dissipated in each resistor.

5. A certain wire has a resistance R . What is the resistance of a second wire, made of the same material, that is half as long and has half the diameter.
