RESEARCH AND PROFESSIONAL PRACTICE

I am an “academic public health practitioner” bringing the rigor of research methods, the value of evidence-based practice, and the experience of successful implementation of community-driven program planning and evaluation strategies to the task of assisting vulnerable communities (globally) to improve their health status. My research focuses on three inter-related thematic areas: 1) community-driven identification of problems, 2) program development and evaluation, and 3) professional public health workforce development.
